INSTALLATION

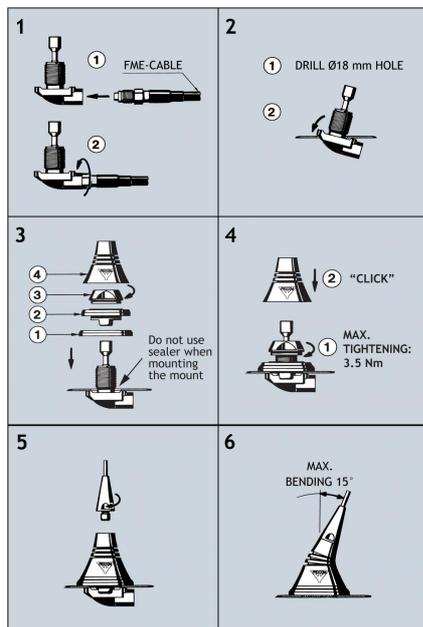

The LX-mount is especially suited for roof-mounting. It is recommended to mount the antenna at the centre of the roof to ensure the best omnidirectional coverage. Mounting can take place in an 18 mm dia. hole with access from the outside only. When cleaning the car in car-washing machines, the whip should be removed – a 9 mm fork spanner can be used. After wash, the whip is refitted and tightened lightly with the spanner.

The mount is equipped with a bendable section ($\pm 15^\circ$) to make it possible to adjust the antenna to an upright position.

2. INSTALLATION STEPS

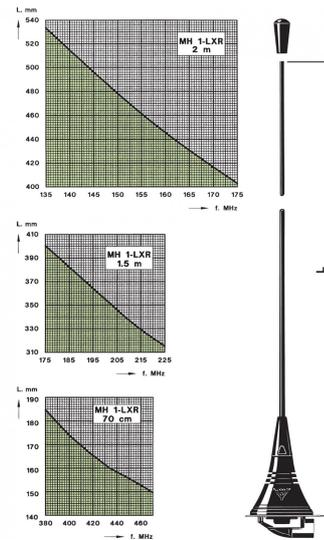

Do not use sealer on rubber gasket or other places.

PLEASE NOTE:

When tightening the revolving nut (see picture 4), special care must be taken to keep the spanner in the correct position.

3. TUNING / MODEL CONVERSION

The antenna should always be tuned using an SWR-meter. The cutting diagrams below serve as a guide for this procedure.
